

Important Information about your Drinking Water

Levels of Radium, (226 + 228) in PEWAUKEE VILLAGE WATERWORKS water exceed standard

Standard Water samples collected to determine compliance with the Radium, (226 + 228) Maximum Contaminant Level (MCL) of 5 PCML indicate our drinking water exceeds the MCL at 6.35 pCi/l, which is a violation of State and Federal Safe Drinking Water standards. Samples collected on the following dates with the following results were used in making this determination: 02/19/2024: 7.92 pCi/l, 06/04/2024: 8.72 pCi/l, and 08/12/24: 8.74 pCi/l.

What precautions should be taken at this time?

You do not need to use an alternative (e.g., bottled) water supply. However, if you have specific health concerns, consult your doctor. What does this mean?

This is not an immediate risk. If it had been, you would have been notified immediately. However, you should be aware of the following:
Some people who drink water containing radium 226 or 228 in excess of the MCL over many years may have an increased risk of getting cancer.

What is being done to correct the problem?

Corrective action(s) taken: The Village of Pewaukee is building a radium removal treatment facility at Well 4 that will be completed in 2025.

We are working to resolve this problem as soon as possible. We will notify you when the problem is resolved.

If you have questions regarding the safety of our drinking water, please contact:
